

PollardProScope

Thank you for choosing the PollardProScope which features an optional Magnifier Lens Kit* protected by an inexpensive replaceable Clear Bottom Lens. All models have an integral Wiper Blade for clearing the Meter's Register Glass.

The premier P58505 model with LED Light and Magnifier Lens Kit features a Glare Shield, Light, and high quality Fresnel Lens to offer superior optical properties over any other meter reading device in the water utility industry.

PollardProScope Models

P58505 36" with LED Light and Magnifier Lens
P58501 24" Standard
P58502 36" Standard
P58503 48" Standard

NO MAGNIFIER
LENS OR LIGHT

PollardProScope Components

P58506 ProScope Case (*fits 24" and 36" only*)
P58507 Replacement Light (*for P58505 only*)
P58508 Magnifier Lens Kit (*fits all ProScopes*)
P58509 Clear Lens Kit (*lens, o-ring, and wiper blade*)
P58510 Replacement Retainer Cap

*Standard models do not come with Magnifier Lens Kit or Light. Note that the Magnifier Lens Kit can be added to any standard model, but the P58507 Light only fits the P58505 model and is sold only as a replacement component.

CARE INSTRUCTIONS

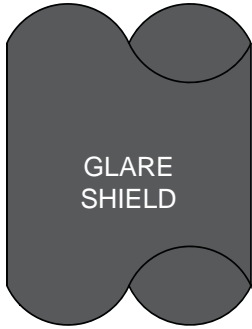

1. Keep your ProScope in a safe environment to maintain the integrity of all optical components. Extreme heat or cold can cause damage due to expansion and contraction.
2. Care should be taken to maintain the optical quality of the unit by carefully cleaning with a soft abrasive-free cloth and mild window cleaning fluid.
3. Avoid scratching and fogging the Clear Lens by contact with rough debris or solvents. This protective bottom lens is economically replaceable, and extras may be kept on hand to avoid down time in the field.

(see back side for optional Magnifier Lens Kit info)

MAGNIFIER LENS KIT INSTRUCTIONS

To properly install or replace the Magnifier Lens Kit, you should familiarize yourself with the assembly illustration here.

The clear Main Body Tube is threaded to attach to the Bottom Retainer Cap. Gently hand tighten to compress the O-ring seals. **DO NOT OVER TIGHTEN.**

Note that the proper placement of the O-rings is needed to assure a water-tight seal.

The Clear Bottom Lens will socket fit in to the Bottom Retainer Cap recess.

A small amount of silicone spray may be applied to the O-rings to reduce friction during assembly, by wetting your fingers with silicon. **DO NOT SPRAY SILICONE ON OPTICAL COMPONENTS.**

Place an O-ring on top of the Bottom Lens, and place the Magnifier Lens flange on top of the first O-ring and Bottom Lens.

Place the second O-ring in to the flange recess and carefully thread the Main Body in to the Bottom Retainer Cap. Note that the bottom face of the Main Body tube will seal on the second O-ring.
